`int num1 = 25;`

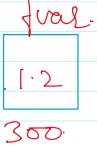

4 bytes

`char ch = 'Z';`

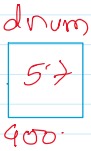

1 byte

`float fvar = 1.2;`

4 bytes

`double dnum = 5.7;`

8 bytes

`int *pte = &num1;`

4 bytes

`char *cpte = &ch;`

4 bytes

`float *fpte = &fvar;`

4 bytes

`double *dpte = &dnum;`

4 bytes

32 bit compiler → size of a pointer is 4 bytes
64 " " " " is 8 bytes
